

# Rubber Roundabouts

## Rubber Roundabout

The perfect solution for creating roundabouts at urban intersections to improve traffic flow and safety.

Fast, easy assembly, consisting of 8 sections that slot together to form a roundabout 3m in diameter.

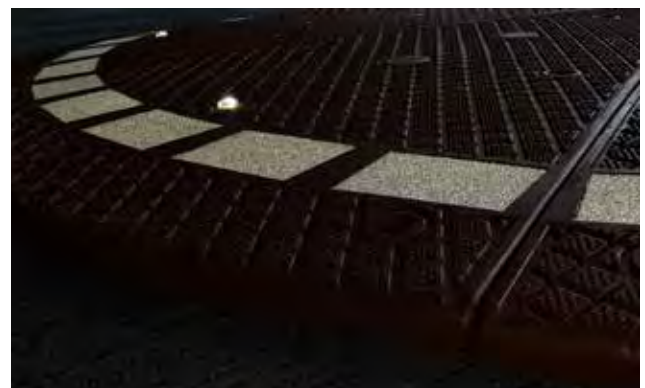

Made from UV-resistant, recycled rubber, with 3M reflective tape and glass eyelets for visibility at night.

The bolt-down design significantly reduces installation time compared to concrete and asphalt methods, and means less disruption to traffic.

- Fast installation – reopen to traffic immediately once installed
- Can be used for temporary or permanent installation
- Manufactured in Europe from recycled rubber
- Anti-skid rubber surface
- 3M reflective tape and glass eyelets for visibility at night

Simply slot each piece together and bolt down to create a roundabout ready for immediate use.

Reflective panels and cat's eyes make the Rubber Roundabout visible in darker conditions.

CODE	DESCRIPTION	SIZE
