## Projected Marking Graphics

Projected marking graphics and safety signs are ideal for high traffic areas where painted decals do not last. Consisting of an LED projector and interchangeable lenses, you can project signage onto nearly any surface and at adjustable sizes.

The Italian-made LED Projector is designed specifically for projections in the most demanding conditions. It is IP65 rated (water & dust resistant) and has an LED life of 50,000 hours. The projector can display a high-quality image while mounted up to 10 metres high.

A projected image will never wear off and is visible in any lighting. The lens is placed inside the projector and can be changed easily between signage, pedestrian crossings and much more. The highly visible projections promote greater awareness in high traffic and critical areas.

- Highly visible on a variety of surfaces
- Ultimate flexibility to suit dynamic environments
- Save time and labour replacing worn out painted floor signs and decals
- Reinforce safety standards and reduce injuries

CODE	DESCRIPTION
49-PM	Marking and Graphics Projector
49-PML	Interchangeable graphics lenses

\*Lens sold separately.
